

NEW BRAND NEW PRODUCT MEGALITE

CARBON FIBRE COMPOSITE POLE

The **MEGALITE** (Carbon Composite Pole) is engineered for light weight superior strength, balance, and durability in harvesting applications. Designed with hybrid composite structure, it combines the **rigidity and lightness of carbon fibre** with the **impact resistance and flexibility of glass fibre** – resulting in an ideal balance between performance and safety.

This advanced pole offers **exceptional lifting power with minimal bending**, allowing harvesters to reach greater heights with improved control and reduced fatigue. Its

lightweight structure ensures easier handling during long hours of operation, while **durable composite build** withstands demanding field conditions such as heat, moisture, and repeated stress.

A QUALITY BRAND

Carbon Fibre Layer Carbon Fibre Layer

Glass Fibre Layer

KEY FEATURES

- **Hybrid Composite Strength:** Carbon fibre core for stiffness, glass fibre layer for added flexibility and impact resistance.
- **Lightweight and Durable:** Reduces operator fatigue without compromising structural integrity.
- **Superior Reach & Control:** Ideal for high and mid-level harvesting with precise maneuverability.
- **Weather and Corrosion Resistant:** Built to last in harsh outdoor environments.
- **Compatible Design:** Fits securely with various harvesting tools and clamp systems.
